

Vollara Air & Surface Pro+

Did you know that each of us consumes more air every day than anything else in the world? It's true. We each breathe in over 3,000 gallons of air every day. And don't we all want to breathe pure, fresh air? Unfortunately the air outside can be bad, and indoors where we spend most of our time, the air can be much worse. In fact according to the Environmental Protection Agency (EPA), indoor air levels of many pollutants may be 2-5 times, and sometimes, more than 100 times higher than outdoor levels. Without some method of control, airborne contaminants can be breathed in or eventually settle on exposed surfaces. But whether you suffer from allergies or not, there is something you can do about it. Vollara Air & Surface Pro+ combines five nature-based processes into one unique, proven, active technology system that helps clean the air you breathe and the surfaces you touch.

About Indoor Air

One alarmingly simple fact to consider: if you don't use an air purifier, you are the air purifier. The EPA says the average adult breathes over 3,000 gallons of air each day and spends a significant amount of time, up to 90%, indoors. The Asthma and Allergy Foundation of America (AAFA) reports that one in four Americans currently suffer from asthma and allergies. And while the human respiratory system has several built-in defenses to prevent substances from entering the lungs, utilizing air purification to remove or reduce the amount of airborne pollution in the breathing space can potentially ease the burden of contamination in the body and help maintain overall wellness. Those common household airborne pollutants can potentially include:

- Dust which is generally comprised of dead skin, dust mites and dust mite feces, insect parts, and more.
- Smoke emanating from tobacco, wood-burning fireplaces, fuel-burning heaters, and cooking.
- Chemicals from spray cleaners, perfumed deodorizers, carpets, and other building materials.
- Various microscopic bacteria and viruses.

All of these will continue to be of concern as modern building methods and the energy efficiency improvements of retrofitting existing structures continue to seal pollutants within indoor spaces. Such buildings tend to have decreased ventilation rates, higher concentrations of indoor-emitted pollutants, and more occupants reporting health problems.

Dust Mites

It has been reported that up to 80% of U.S. homes have large dust mite infestations, which may not be surprising considering as many as 40,000 dust mites can live in a single ounce of dust. These pests are second only to pollen in causing allergic reactions, mostly from airborne dust mite feces, ranging from itchy noses and eyes to severe asthma attacks. Along with keeping a low relative humidity between 30 – 50%, one of the most obvious methods of controlling dust mites may be to just reduce the amount of dust. An air purifier that works to continuously remove particulate from the air, combined with a thorough cleaning regimen that includes vacuuming can be an effective, simple strategy to minimize the aggravations of airborne dust.

Exposed Surfaces

Contamination on surfaces isn't limited to visible dust - there are numerous other types of contaminants that generally get spread where people live. Whether from sneezing and coughing or just everyday handling, door knobs, counter tops, and almost any exposed surface can become a potential staging ground. It's also interesting to note that, by legal definition, disinfectants must be capable of reducing the level of pathogenic bacteria by 99.999% during a time frame of less than 10 minutes. Yet, as widely accepted as chemical disinfectants are, they may have little or no effect once removed from a surface due to lack of contact exposure. Because of this, some type of surface contaminant reduction between cleanings or disinfection may be desirable and beneficial as part of a regular regimen.

*These results have not been evaluated by the FDA. This product is not a medical device intended to diagnose, treat, cure, or prevent any disease.

**Published scientific studies conducted on behalf of Vollara by Dr. James Marsden at Kansas State University demonstrated that Vollara's ActivePure® Technology substantially reduces contaminants on surfaces. No claim with respect to contaminants is made based on these results. Field results may vary based on environmental conditions.

Vollara Air & Surface Pro⁺

The Advantage of ActivePure[®]

With an end result similar to traditional filtration, ActivePure's active technology will clear the air of dust and floating particles, but unlike filters, it works out in the indoor environment, using air from the unit to carry "scrubber" ions and oxidizers through the air and to surfaces where they may be needed most. ActivePure[®] makes extensive use of five nature-based processes:

- **Sunlight** - for germicidal UV light
- **Rain and thunderstorms** - to generate ionization
- **Lightning** - to produce activated oxygen
- **Photocatalysis** - for hydro peroxides and oxide ions
- **Wind** - to distribute these properties into the environment

Utilizing Lights and Metals

To create oxide ions and powerful oxidizers, the ActivePure[®] Cell located inside the Vollara Air & Surface Pro+ utilizes an advanced form of photocatalytic process known as ActivePure[®] Technology. This proprietary cell technology incorporates short wave UVC germicidal light as a catalyst to react with a formulated titanium dioxide and a proprietary blend of transition metals coating a target honeycomb matrix. The strong germicidal capabilities of the cell ensure any contaminants passing through the Vollara Air & Surface Pro+ are inactivated and rendered harmless.

Ionization Reduces Airborne Particulate

Vollara Air & Surface Pro+ includes a dual polarity ionization system designed to bring about the agglomeration of airborne dust particles, odors, smoke, and contaminants to effectively cause them to cluster together and drop from the air. This airborne particulate can contain both pollen and dust along with its various constituents including dust mites, dust mite feces, and insect parts. Tobacco, cooking, and other types of smoke are also removed from the air by ionization through a similar process.

The Power of Activated Oxygen

To eliminate difficult odors as well as odor-causing bacteria at the source, Vollara Air & Surface Pro+ offers an adjustable, optional purification function to produce activated oxygen, otherwise known as O₃ or ozone. A naturally occurring oxidizer with a very short half-life, of approximately 20 minutes, activated oxygen works to

break down all forms of odors and many types of air pollutants before breaking down itself to basic oxygen, allowing it to be used in unoccupied spaces for odor remediation and dust mite control as well as for everyday low level odor and contaminant control purposes as desired.

Scientifically Studied

Testing on behalf of Vollara by Dr. James Marsden, and others at Kansas State University was conducted to determine the potential use of ActivePure[®] (RCI) Technology for the inactivation of Staph (Staphylococcus aureus), MRSA (Antibiotic Resistant Staph), E. coli (Escherichia coli), Bacillus spp., Streptococcus spp., Pseudomonas aeruginosa, Listeria monocytogenes, Candida albicans, and black mold on stainless steel surfaces at diverse contact times in a controlled airflow cabinet. Further testing was conducted for Vollara at the University of Cincinnati Center for Health-Related Aerosol Studies to investigate the novel air purification technique combining aerosol/bioaerosol control mechanisms of unipolar ion emission and photocatalytic oxidation promoted by the ActivePure[®] (RCI) technique. These tests validated the effectiveness of the ActivePure[®] Technology in controlling contaminants.

An Earth Friendly Value

Active technology air purifiers like Vollara Air & Surface Pro+ with ActivePure[®] offer opportunities to contribute to an earth friendly lifestyle by continuously working to reduce biological contaminants on surfaces which may lessen the amount and impact of chemicals needed for cleaning and deodorizing, potentially saving money and resulting in fewer empty containers going into the trash. By evaluating based on total area covered and suggested retail pricing, Vollara has calculated that Vollara Air & Surface Pro+ costs up to 83% LESS per square foot of coverage when compared to popular brands of simple HEPA filters.

Space Certified Technology

ActivePure[®] Technology is based on a variation of the technology originally developed for use in the International Space Station and is recognized as the exclusive Certified Space Technology by the Space Foundation in its category.

Unique Features of Vollara Air & Surface Pro+

- Uses super oxide ions and hydro peroxides created by ActivePure[®] Technology to remove contaminants.
- Alternating positive and negative charged ions remove microscopic particles from the air to reduce harmful airborne pollutants.
- Features high intensity UVC light to make use of the same oxidation and ionizing properties as naturally occurring sunlight.
- Certified Space Technology™ (www.spacefoundation.org)
- A-PURE Mode uses exclusive ActivePure[®] (RCI) Technology to produce safe, low-level, oxidizers and super oxide ions for basic, everyday applications.
- A-PURE+ Mode adds the power of activated oxygen for faster coverage and increased elimination of smoke, odors, and surface contaminants.
- 2/4/8 Depart Mode increases the maximum output of activated oxygen for increased effectiveness in unoccupied areas.
- Improves the quality of air in an environment up to 3,000 sq. feet.
- Alerts for normal maintenance or when service is required.

*These results have not been evaluated by the FDA. This product is not a medical device intended to diagnose, treat, cure, or prevent any disease.

Vollara Air & Surface Pro⁺

Who Should Use

Without exception, everyone breathes, so it's really a matter of having the knowledge and understanding of what else is being absorbed from the air when it is inhaled. And, unlike other purifiers, Vollara Air & Surface Pro+ controls surface contaminants that can affect your health. Vollara Air & Surface Pro+ is suitable for anyone concerned about indoor air quality and surface contaminants with the desire to provide a healthier indoor living environment using nature-based, proven technologies that are both convenient and cost effective.

Complementary Products

As one part of a group of essential wellness products designed around the concept of absorbing the best air, water, and nutritional products for overall wellness, Vollara Air & Surface Pro+ offers university tested, environmentally active air purification that works out in the indoor environment to provide cleaner, healthier air to breathe as it helps control and eliminate specific contaminants on exposed surfaces.

FreshAir Cube - designed to provide the same benefits of ActivePure[®] in a more compact unit. The FreshAir Cube is intended for use in smaller homes, apartments, college dorms, basements, and wherever ActivePure[®] is needed in a smaller indoor space.

LivingWater - offers great-tasting pH-optimized water with buffering alkalinity and antioxidant properties with the convenience of tap water, all at a fraction of the cost of bottled water. When used with naturally occurring extracts and whole food nutritional products, LivingWater may improve effectiveness by increasing absorption into the body and providing pristine hydration.

LaundryPure - supports a "green" lifestyle by helping reduce waste and cut down on energy consumption, eliminating the need to wash clothing in hot water or use detergents. LaundryPure also helps keep laundry chemicals out of clothing, away from sensitive skin, and from going down the drain.

Essentials for Life (Re:Fuel Formula) - offers a naturally occurring, whole food nutritional foundation to build on by covering the body's basic needs of vitamins, minerals and enzymes. Essentials for Life is the starting point for a complete supplementation program.

Re:Plenish - centered around the high ORAC value of the muscadine grape. Re:Plenish is a delicious way to help rejuvenate cells with the power of the antioxidant properties of polyphenolics and resveratrol.

Re:Sist - contains a proprietary blend of herbal extracts, Elderberry fruit extract, astragalus root extract, Echinacea extract, Reishi mushroom, Aloe barbadensis and Larch tree arabinogalactans. This blend supports the immune system and includes antioxidants to prevent damage from free radicals.

Frequently Asked Questions

- *How does Vollara Air & Surface Pro+ work?*

Five nature-based technologies including short wave UVC light, positive and negative ionization, RF ionization, activated oxygen, and proprietary ActivePure[®] Technology are combined in one system to very effectively reduce dust and particulate, smoke, odors, and surface contaminants in the indoor environment.
- *What is environmental conditioning?*

Because Vollara Air & Surface Pro+ treats interior exposed surfaces as well as indoor air, it doesn't fit into the category of an air purifier only. The term "environmental conditioning" more accurately describes the overall effect of the active technologies within the living area.
- *Should I be concerned about ozone?*

Vollara Air & Surface Pro+ provides the OPTION of using activated oxygen (ozone) when desired. The unit produces no ozone when set on Normal Mode, while allowing incremental preset adjustments for specific square footages when set to A-PURE Mode. Depart Mode should not be used when anyone, including pets, is or will be present in the area. For complete operating procedures, see the Vollara Air & Surface Pro+ owner's manual.
- *Is Vollara Air & Surface Pro+ loud like a lot of air filtration machines?*

The loudness of an air purifier (measured in decibels) depends on the fan operating speed, and personal noise tolerance. In some

situations, a high fan setting may be somewhat more effective; however fan speed of the Vollara Air & Surface Pro+ generally can be adjusted to your preference without adversely affecting overall performance, especially when using ceiling fans or operating an HVAC system.

- *How long should the Vollara Air & Surface Pro+ run?*

For best results, it is recommended to continuously run the Vollara Air & Surface Pro+. This allows constant treatment for particle removal and reduction of contaminants on surfaces.
- *Where should I place Vollara Air & Surface Pro+?*

Place the Vollara Air & Surface Pro+ in your home, in as high a place as is feasible. By doing so, you'll get the most benefit from the clustering effect of ionization and maximum dispersion of ActivePure[®] properties and the purifier feature of the Vollara Air & Surface Pro+.
- *What is the expected coverage?*

The Vollara Air & Surface Pro+ is designed to cover from 500 to 3,000 square feet of area in an average home.
- *How do I know when to clean the unit?*

A notification will appear on the display as a reminder to clean the rear lint screen, purifier plate (if equipped), and to vacuum the ActivePure[®] Cell and front and rear grills. This is a good sign and lets you know how much the Vollara Air & Surface Pro+ is helping you and your family.

*These results have not been evaluated by the FDA. This product is not a medical device intended to diagnose, treat, cure, or prevent any disease.

**Published scientific studies conducted on behalf of Vollara by Dr. James Marsden at Kansas State University demonstrated that Vollara's ActivePure[®] Technology substantially reduces contaminants on surfaces. No claim with respect to contaminants is made based on these results. Field results may vary based on environmental conditions.

Vollara Air & Surface Pro+

Installing

For optimal performance, place Vollara Air & Surface Pro+ in your home as low and central as possible, near the source of pollution or in the most heavily used area.

Using Vollara Air & Surface Pro+

The power button on the front control panel will turn the unit on and off (standby). The 5-speed fan may be adjusted according to personal sound preference without adversely affecting performance.

The A-PURE Mode turns on the adjustable purification function for added effectiveness.

Reminders and notifications will appear on the screen when it's time for regular servicing or cleaning. For on-the-spot treatment, Vollara Air & Surface Pro+ can be easily moved to any room or area.

Depart Room Mode

For periodic additional effectiveness or remediation of stubborn, difficult odors, air quality problems, or surface contaminant issues, the Depart Room Mode can be used, but only in areas that will remain unoccupied for the duration of the treatment.

Special Considerations

Vollara Air & Surface Pro+, which includes an adjustable purification function and Depart Room feature, does not meet California requirements and cannot be shipped to California or Canada. The Vollara Air & Surface Pro+ has been designed with a second ActivePure® Cell in place of the purifier and Depart Room Mode functions, and is available for use in all 50 states as well as Canada.

Warnings

- The unit should always have unrestricted airflow.
- Point the unit toward the center of the room for maximum dispersion of ions.
- When operating a central heating and air conditioning fan, set the coverage up to the total ventilated indoor area. Otherwise, set the coverage up to the size of the room. Do not exceed the size of the ventilated indoor area when setting the purifier level.
- Please note: "unoccupied areas" includes pets. Some pets, like humans, may experience adverse reactions from exposure to increased levels of ozone and should not be present during DEPART ROOM operation.
- Do not look directly at the glowing lamp. Prolonged exposure, even to reflected UV light, can cause eye damage according to the American Conference of Governmental Industrial Hygienists (ACGIH) Standards.

Specifications

Model	Vollara Air & Surface Pro+
Electrical	<ul style="list-style-type: none">• 100 ~ 240 VAC 50/60 Hz External Power Supply• 43 watts maximum power consumption• Positive & Negative ion generation
Dimensions	• 11.75" high x 9.5" wide x 10" deep
Weight	• 7.6 pounds
Purification Plate Output (High Mode)	>0.05 ppm
Coverage	Covers a range of 500 sq. ft. (23 m ²) to 3,000 sq. ft. (279 m ²)* * Depends on variables such as severity and frequency of pollution, humidity, and temperature.
